
Thema

The underlying idea is always customer orientation and continuous progress.

Thema's Identity

Thema is an Italian company specialising in the design and creation of customised solutions for doors and windows, façades and structures in steel and aluminium for any type of building, from simple houses to more complex constructions.

Tailor-made solutions that meet all requirements in terms of noise, design and heat, through careful, cutting-edge design direction, from engineering through to creation and after-sales service.

Thema integrates experimentation, technology, bespoke manufacturing, together with analytical and creative capabilities. We provide cladding for comprehensive, ambitious buildings developed to size: specially conceived systems, born of Thema expertise, and of customer needs and inspiration.

We do this with a method, MetodoThema©, a design process developed over years of experience.

Founded in Verano Brianza (MB) in 2008, Thema works in **office&building, hospitality, residential, public space,** and **retail buildings**, with different-scale projects that are created in partnership with architects, designers and international businesses.

Superior 4.0

From simple factory building to industry 4.0

Type of intervention: Upgrade

Superior 4.0

The project

A building in Great Britain, upgraded from designs by Ines Dossi Designer, has been completely transformed from a simple factory building to industry 4.0.

This was a significant project for Thema, due to the technical characteristics of the upgrade, the management and logistics of a job outside Italy, and the use of specific products, as well as having to work with British technical standards.

Thema coordinated a series of activities that are not strictly part of the company's core business. Management of logistics outside Italy demonstrated the solid organisation of our project management, especially in the light of such a technically complex project.

The building itself is technically significant due to the load-bearing structure for the offices, the plasterboard facings, and the air conditioning and heating systems.

Another important feature, especially in terms of such large surfaces, consists of the use for the first time of windows and glazing with fire resistance compartmentation. Thema created the double vestibule in the entrance, where the weight of the building's main façade is offloaded onto the beam that acts as a doorway.
