

---

## Thema

The underlying idea is always customer orientation and continuous progress.

---

## Thema's Identity

Thema is an Italian company specialising in the design and creation of customised solutions for doors and windows, façades and structures in steel and aluminium for any type of building, from simple houses to more complex constructions.

**Tailor-made solutions that meet all requirements in terms of noise, design and heat, through careful, cutting-edge design direction, from engineering through to creation and after-sales service.**

Thema integrates experimentation, technology, bespoke manufacturing, together with analytical and creative capabilities. We provide cladding for comprehensive, ambitious buildings developed to size: specially conceived systems, born of Thema expertise, and of customer needs and inspiration.

We do this with a method, MetodoThema©, a design process developed over years of experience.

Founded in Verano Brianza (MB) in 2008, Thema works in **office&building, hospitality, residential, public space,** and **retail buildings**, with different-scale projects that are created in partnership with architects, designers and international businesses.

## The project

A trademark, balanced complex. developed by Luconi Architetti Associati. The design project for the headquarters of Pharmalife Research, a company that studies medicinal plants and derivatives, as well as developing new cosmetic and plant therapy formulas, integrates a high-tech image with careful use of materials. The building's architecture and the design of the spaces - productive areas with extremely sophisticated plant, research laboratories and offices - come together to define a unitary complex in a prestigious setting.

Thema created a totally custom-made façade using a mix of iron, aluminium and glass, together with covering in alucobond. The seamless structural glazed section uses non-standard-size panes with an integrated shade system: the seamless structure consists of 68 panes, each weighing a tonne. The vast research into glass with the best possible technology to suit the project involved experimenting with 25 different glass samples. Thema is also responsible for the the automatic vestibule and entrance shade, which is totally covered in alucobond.
